Chad Koslovsky

Modernizing systems without losing the people who rely on them

Milliken, Colorado · chad@koslovsky.xyz

Senior Infrastructure Engineer, Infrastructure Integration | Salas O'Brien

Tailored portfolio: https://salasobrien-integration.koslovsky.xyz

01 PROFILE

I bring hands-on systems engineering, client infrastructure modernization and the operational judgment to keep people working through change. At FRII I led NOC escalations and carried systems responsibility through an ownership transition. Through Technomancy IT, I assess inherited environments, implement the improvements and stay accountable for support.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Own client systems from initial assessment through implementation and continuing support. Work across Microsoft 365, Azure client environments and identity integrations, connecting infrastructure decisions to the people using them.

Modernized Excell's legacy servers, employee computers and networks; implemented Windows Server, Active Directory and VPN access for corporate users and supported a satellite location.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Led the NOC and engineering escalations across hosting and colocation services. After years at FRII, carried sole systems-engineering responsibility for about a year during an ownership transition, with the NOC retaining first-line coverage.

Migrated Hyper-V and VMware ESXi workloads into Docker and Kubernetes and delivered smaller server and firewall upgrades. Ran SOC 1 and SOC 2 audits, documenting controls, operating procedures and recovery verification.

Systems / Software Engineer · Office Evolution | 2014-2015

Built centralized applications connecting CRM, provisioning, onboarding and service operations across locations. Turned cross-department handoffs into explicit workflows for the teams doing the work.

Supported architecture across client environments and worked with the CEO and CIO to connect system design with operational needs.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported business networks, systems and endpoints for managed-service clients, including on-call troubleshooting and direct support for business owners and users.

Built repeatable diagnostic tooling around recurring problems, used remote monitoring to investigate failures and provided antivirus services alongside broader IT support.

Infrastructure and Systems Focal · IBM | 2010-2012

Operated shared enterprise infrastructure and coordinated changes, incidents and escalations across application, infrastructure, vendor and business teams.

Managed virtualization test labs and hosted desktops; automated audit, backup and compliance workflows to make recurring operational checks repeatable.

03 SELECTED WORK

Legacy infrastructure modernization · Excell Services LLC · Technomancy IT client | Client engagement

Rebuilt or replaced legacy servers and employee computers, upgraded the network, and implemented Windows Server, Active Directory and VPN connectivity. Supported the satellite-location rollout while remaining the client's direct IT support contact.

Workload migration and operational readiness · Front Range Internet Inc. | 2015–2020

Moved Hyper-V and ESXi workloads into Docker and Kubernetes while maintaining monitoring, recovery checks and escalation support. Built tooling for NOC operators and hosting customers, tying modernization to the people responsible for running it.

Connected provisioning and onboarding · Office Evolution | 2014–2015

Built shared applications that connected CRM, provisioning, onboarding and service operations. Made the handoffs between departments explicit so technical changes and service delivery could follow a coherent workflow.

04 CAPABILITIES

Windows Server and Active Directory; Microsoft 365 administration · Azure client environments and Microsoft Entra ID implementation · VMware, Hyper-V, Docker and Kubernetes workload modernization · PowerShell and Bash automation; monitoring and recovery verification · Cross-team change coordination, escalation, documentation and user support
